

Clinician Survey: Photo Sets

The Salutone demo provides each of the **6 players with a set of 4 photos** to contribute. The demo must also assign **diagnoses, pronouns, moods, issues, thoughts, and feelings** to each player.

Clinical details about the fictional players can be slight, but details should align with the photo sets, in a way that speaks intuitively to clinicians and other demo observers. Otherwise, the demo might create confusion about the game.

Please view **Photo Sets 1-9**. For the 6 sets you find most expressive, free-associate some clinical words or phrases to fill out the tables below. The goal is natural, realistic clinical vocabulary. Limit detail to what you hear in 1 session on 1 day.

Photo Sets 1-9 are in a separate file. You can view them there, then fill out and return this page. Print copies as needed.
