

Clinician Survey: Photo Sets

The Salutone demo provides each of the 6 players with a **set of 4 photos** to contribute. The demo must also assign **diagnoses, pronouns, moods, issues, thoughts, and feelings** to that player.

Clinical details about the fictional players can be slight, but details should align with the photo sets in a way that speaks intuitively to clinicians and other demo observers. Otherwise, the demo itself may create confusion about the game.

Please view **Photo Sets 1-6** and, for each set, free-associate some clinical words or phrases to fill out both tables below. Entries are optional; the goal is natural, realistic clinical vocabulary. Limit detail to what you hear in 1 session on 1 day.

Photo Sets 1-6 are in a separate attachment file. You can view them there, then fill out and return just this survey page.
